2. Citations and explanations

The subject matter of claim 1 is a front end arrangement for ultrasound imaging, comprising a diplexer connected between a probe and a generator, on one hand, and a pre-amplifier on the other, said diplexer being described exactly as per figure 4 of the application. Consequently, said claim is clear.

None of the devices known from the documents cited in the search report comes close to the diplexer specified in claim 1.

The subject matter of claim 1 therefore meets the requirements of novelty and inventive step of the PCT.

Claims 2 to 4 refer back to claim 1 and therefore also meet, as such, the requirements of novelty and inventive step of the PCT.

The subject matter of all the claims fulfils the criterion of industrial applicability.
